

Job Title: Node Developer (Backend)

No of Position: Multiple Positions

Experience: Fresher, Junior, Mid, and Senior Level

Location: Remote

Company Overview:

Cacti is a "Talent-as-a-Service (TaaS)" marketplace platform that helps bring together global talent seekers, top talent, and skill enhancers under one brand. We democratise access to global opportunities for talented professionals and empower organisations with transparent, outcome-based workforce models. We work with clients across diverse sectors in the areas of legal and business solutions, contract management, finance, technology, and analytics. Our secured and collaborative platform has a network of over 2,000 professionals, 100 subject matter experts, and 50 law and service firms around the world.

Role & Responsibilities:

- You will explore the alternatives to the recommended solutions based on research that includes literature surveys, information available in public domains, vendor evaluation information, etc., and build POCs
- You will create requirement specifications from the business needs, define the to-be-processes and detailed functional designs based on requirements.
- You will support configuring solution requirements on the products; understand any issues, diagnose the root cause of such issues, seek clarifications, and then identify and shortlist solution alternatives
- You will also contribute to unit-level and organizational initiatives with an objective of providing high-quality value-adding solutions to customers.
- Ability to work with clients to identify business challenges and contribute to client deliverables by refining, analyzing, and structuring relevant data
- Awareness of latest technologies and trends
- Logical thinking and problem-solving skills along with an ability to collaborate
- Ability to assess the current processes, identify improvement areas and suggest the technology solutions
- Ability to build positive working relationships within our Engineering team, across the company, and with partners.
- Self-driven and able to work with minimal direction and in a team to research innovative solutions to challenging business/technical problems.
- Excellent verbal, written and interpersonal skills.

Competencies Required:

- Bachelor's degree in Computer Science, Engineering, or an IT-related discipline or equivalent combination of education and experience.
- Must have a strong understanding of vanilla JavaScript

- Strong understanding of Express.js. Familiarity with other foundational and MVC frameworks is a plus
- Strong understanding of REST API Concept, MVC Architecture, and Asynchronous Request handling techniques
- Proficient understanding of GIT / SVN
- Understanding of/comfortable with Agile development methodology
- Knowledge of any other Server-Side scripting language such as Python, PHP, Go or Ruby will be an advantage.
- Knowledge of Frontend framework/library: React / Angular / Vue
- Strong understanding of HTML5, CSS3
- Proficient in Object-Oriented development Principles (OOPs)
- Strong understanding of MEAN or MERN Stack.
- Experience with one or more of the following databases: MongoDB. MySQL is optional
- Should know AWS services like AWS S3, SES, etc
